

SSCF Resource Hub Low-Fi Prototype

This **Resource Hub** prototype is designed as an accessible and user-friendly platform for Saskatchewan charity. The low-fidelity wireframe ensures a structured layout that aligns with core **people-centered design** principles, making it easier for users to find relevant resources efficiently.

Key People-Centered Design Concepts

1. Affordances

- The **search bar** at the top provides a clear affordance for users to input queries, ensuring they can quickly locate necessary information.
- Buttons and clickable cards are designed to indicate interactivity, guiding users intuitively.

2. Gestalt Principles

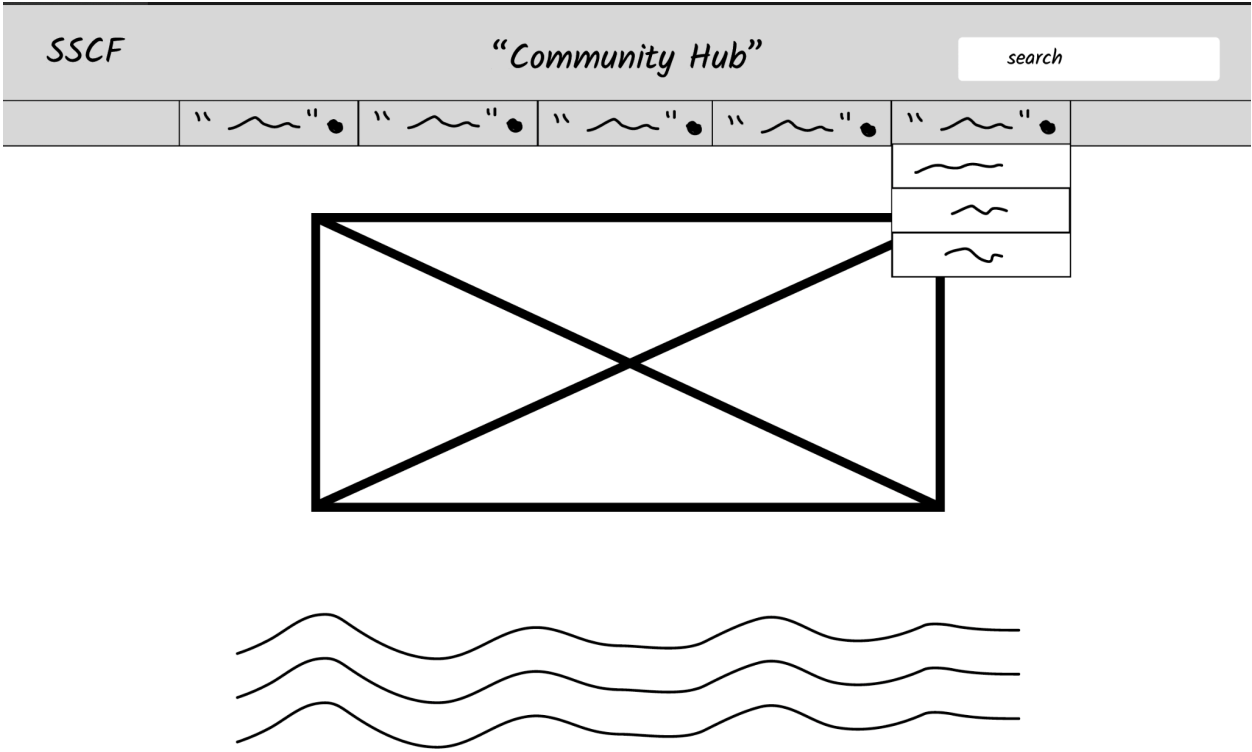

- **Proximity:** Related resources are grouped together, such as grant opportunities, training materials, and legal guidelines.
- **Similarity:** Icons and colors differentiate sections, improving scannability.
- **Continuity:** The layout follows a structured left-to-right, top-to-bottom reading flow.

3. Constraints

- Login/signup restrictions ensure that only **verified charity members** can access exclusive content.
- Certain actions (e.g., grant applications) are limited to eligible users to prevent misuse.
- A limited number of navigation links in the menu/buckets prevent cognitive overload.

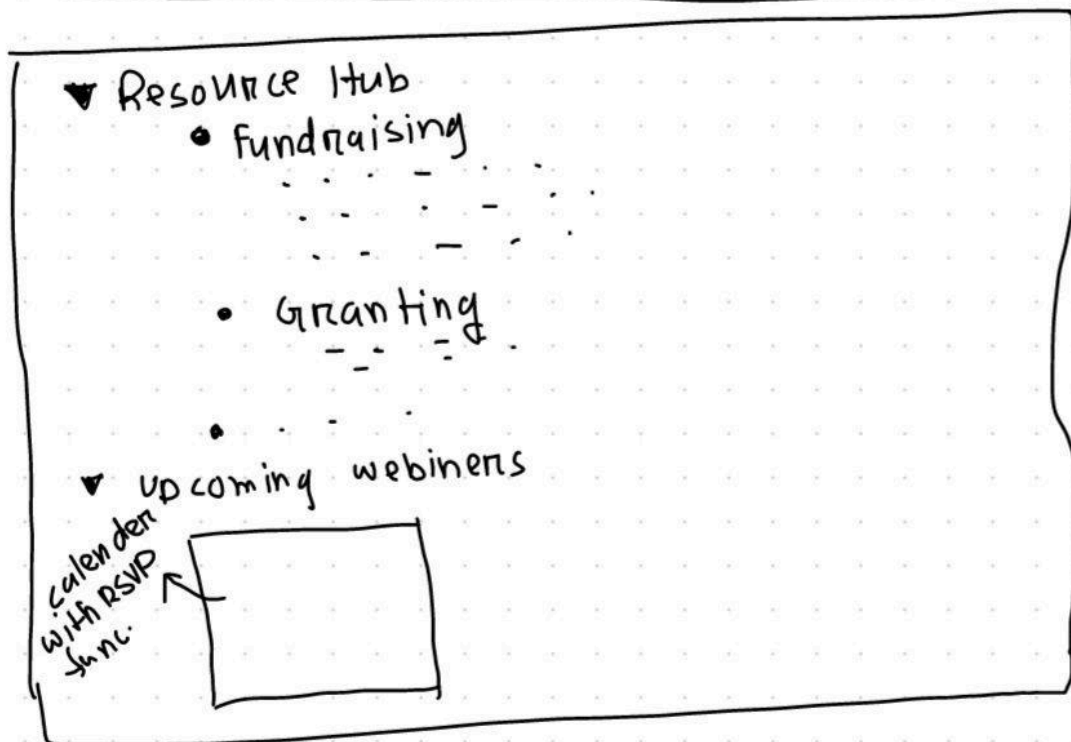

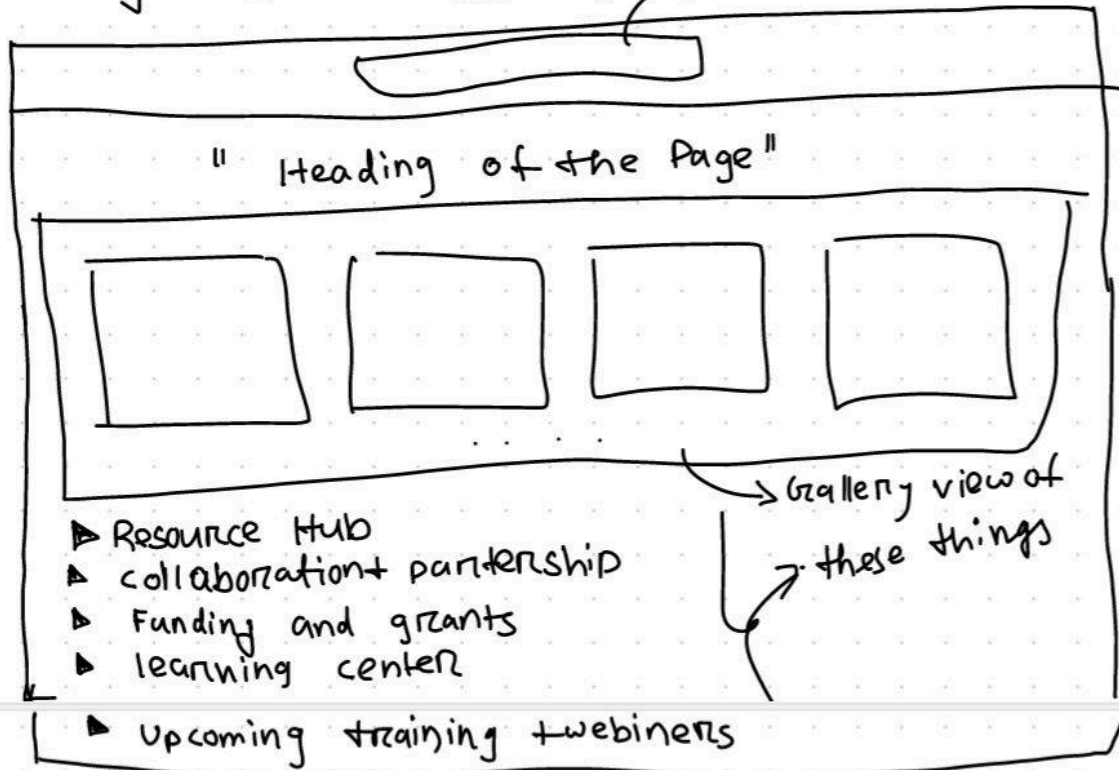

By integrating these **people-centered design** principles, the prototype ensures an intuitive, accessible, and structured user experience for non-profit organizations.
